

Software Upgrades

We are pleased to announce that as of **MONDAY, JULY 21st**, you can now use *Google Chrome* for a browser, as well as *Mozilla Firefox* and *Internet Explorer*.

The new programming will be noticeable when you bring up the list of wells in your search. You will notice that the grid with the well list looks a little different. The font is larger and there are a few basic changes to how the grid works. Please review the following:

TIPS FOR VIEWING THE SEARCH RESULTS TABLE

- **To re-sort the data in the table:**
Click on a blue column header label. To sort on multiple columns, hold down the Shift key while clicking on multiple blue column name in the table header.
- **To hide a column:**
Click on a green column name in the table footer.
- **Excel spreadsheet:**
To download an Excel spreadsheet file containing the search results, click on the button labeled 'Excel'. If you have set the parameter News in your search, details about any new information since that date will be included in the Excel spreadsheet.
- **To temporarily hide the Search Wells form:**
Click on the blue link labeled 'Hide Search Wells Form'. Click on the same link to reveal the form again. You may wish to use this feature to make more vertical screen space available while you view the search results.
- **If your search is taking a long time:**
The search might be retrieving and displaying thousands of records. Consider setting additional search parameters to retrieve fewer records.
- **To filter the data in the search results table:**
In the input field labeled 'Search' (located just above the table, on the right) type a word. The data will be filtered to include only rows in which that word appears. The search is case-insensitive. The filtering applies to all the rows and columns.
